

Weekly reports draft..

Week 5: Based on the advice of our course teacher and supervisor, we began planning and writing Chapter 2 (Background & Literature Review) and Chapter 5 (Standards and Design Constraints). We divided the work among team members and made steady progress throughout the week. By the end of the week, we had completed approximately 80% of both chapters.

Week 6: After receiving feedback from our course teacher, we made the necessary adjustments and modifications to Chapter 2 and Chapter 5. We also drew the required diagrams as part of the documentation. Following the teacher's guidance, we successfully completed both chapters by the end of the week.

Week 7: We arranged a meeting with our supervisor to review our overall progress and ensure we were on the right track. Based on his feedback, we made the necessary adjustments and continued moving forward. Additionally, as our class had a scheduled presentation, we prepared a slide deck and delivered the presentation successfully.

Week 8: We began working on Chapter 3 (Project Design) by discussing with our supervisor how to approach the design of our project. We shared our ideas and plans, and based on his instructions, we proceeded with the writing. By the end of the week, we successfully completed this chapter.

Week 9: Our course teacher reviewed all the chapters written so far and provided useful feedback, including advice on diagram formatting, task allocation, and Gantt chart modifications. We carefully applied all the suggested changes and completed those sections within the week. We also began writing the Conclusion chapter as an additional step forward.

Week 10: We presented our full paper to the course teacher and received his final review. Based on his feedback, we made the required modifications and finalized the paper. By the end of the week, the complete FYDP paper was ready for submission.

Week 11: Having completed the full FYDP 1 syllabus, we focused on preparing our final presentation for the course's concluding class. Each team member also made individual preparations for the FYDP defense by reviewing the project thoroughly. We spent time strengthening our understanding of relevant external knowledge to be well-prepared for the defense.
